### **Lead Free Product Transition**

Dear Valued Business Partner,

Recently the ABCB announced via the National Construction Code (NCC 2022) that it will introduce new lead free requirements for plumbing products containing copper alloys (brass) which are in contact with drinking water. The timeline published by the ABCB currently states that this requirement will come into effect from September 2025 at point of installation.

For RWC and you, our business partners, this is a significant change, and we are here to guide you through this.

With over 70 years of innovation, RWC has led the industry by delivering solutions for the jobsite through industry leading execution and adding value for our distributors. To ensure you are supported through this change, RWC has appointed a project team dedicated to the lead free product transition strategy.

We are currently developing a transition timeline for our product families which we will release once finalised. In the meantime, we encourage you to contact your RWC account manager with any questions or feedback you have relating to this change.

Yours Sincerely

**Nicole Sumich**  
EVP & President, Asia Pacific
