

## **Boiler Plus Compliance – Underfloor Heating Controls**

As of April 2018, the Department for Business, Energy and Industrial Strategy (BEIS) has introduced new regulation called Boiler Plus, which relates to the energy efficiency of heating systems.

When installing underfloor heating with a combination boiler to ensure compliance use JG Aura Wireless Thermostat and a JG Hub. Alternatively, if you install a weather compensated boiler as the heat source, you can use any of the JG Aura Thermostat range.
